Remote Data Deletion with CLEARSURE for Windows mobile PC

Demonstration
Version Only

Customer Benefits

- Prevent data leaks from lost or stolen PCs Data can be remotely locked or deleted from a PC via W-WAN, even when the PC is in shutdown.

While mobile usage becomes increasingly important in the workplace, there are more risks of information leaks due to loss or theft. CLEARSURE resolves these issues by making it possible to remotely lock or delete data from a lost or stolen PC—even when its system is shut down—as long as it is within a 3G, LTE or GSM network area. With CLEARSURE, users enjoy greater assurance when they bring their PCs off-premise, as well as enhanced sales activities and improved productivity.

while traveling

Actual Usage

③ Activate PC & delete encryption key in the HDD / Lock PC

Key Advantages of the Service

■ Two security commands prevent data Leaks with high certainty.

Users access Fujitsu's control server via the Internet. They can either send a "PC lock" command that prevents the PC from starting, or "data deletion" which immediately deletes the encryption key to access the data in the HDD, thus preventing the HDD data from being analyzed and restored.

■ Lock and delete commands can be executed remotely via W-WAN.

CLEARSURE allows users to remotely lock their PC or delete HDD data as long as the PC is within a 3G, LTE or GSM network area. Wherever a PC is lost or stolen, CLEARSURE can protect confidential information.

■ CLEARSURE can be activated even when the PC system is shut down.

"PC lock" and "Data deletion" feature can be available regardless of power status in the PC, because the customized module works even when PC is in shutdown.

■ Users receive a report from the PC.

After the execution of lock and delete commands, the PC sends a status report. In addition to the result of commands, this report includes other critical information such as the PC's location and the time of the last login after the PC became lost. This allows users to know the risk of data leaks by comparing login time with the time that the PC was lost.
