

UPDATE WINDOWS 11 DRIVERS

Via Device Manager:

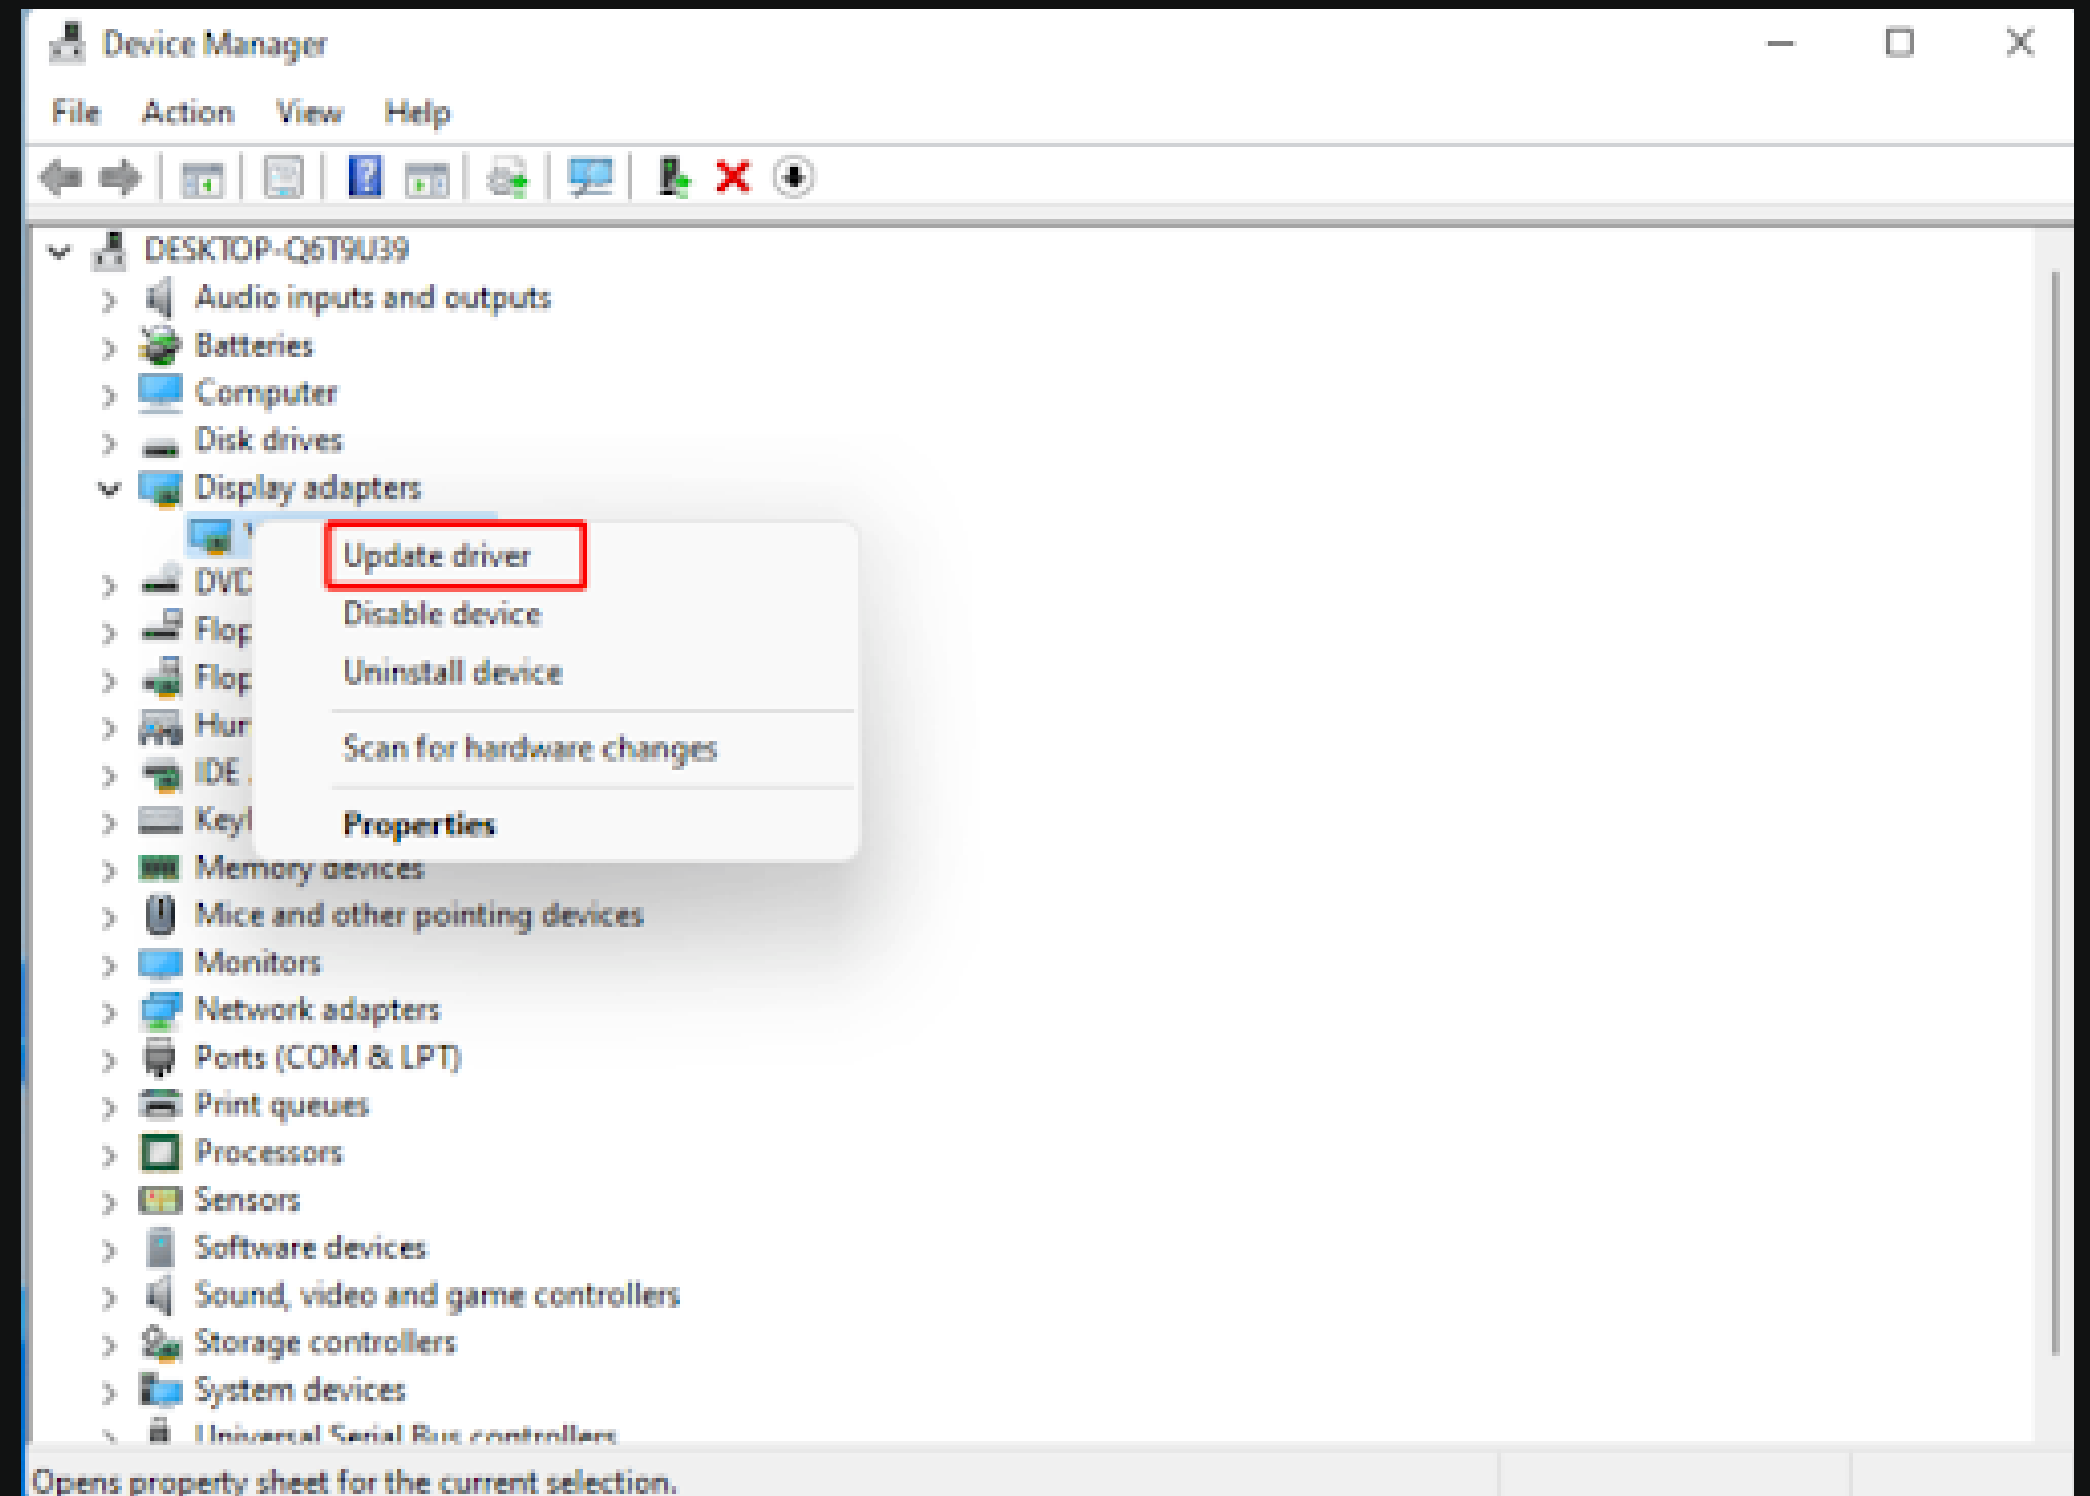

Device Manager lists all the hardware and external devices connected to the system and the user can update the driver, rollback driver update, uninstall the device, view the driver properties, etc. there.

Step 1: Click the **Search** icon from Taskbar, type **device manager**, and click the relevant search result to open this app.

Step 2: Go to the required device, for example, if you want to update the graphics card, right-click the card from **Display adapters** and choose **Update driver**.

Step 3: Choose an update option – you can choose the first one, then Windows will search for your computer for the available driver and install it on the machine.

The image features three decorative elements in the corners: a large one in the top right and two smaller ones in the bottom left and bottom right. These elements are composed of overlapping, semi-transparent shapes with a vibrant color gradient ranging from blue and purple to pink and orange, creating a modern, abstract aesthetic.

Via Windows Update:

Windows updates not only install security updates but also download and install the latest drivers to make sure of efficient functioning. Follow the steps to start Windows 11 driver updates.

Step 1: Press **Win + I** to directly open the **Settings** app.

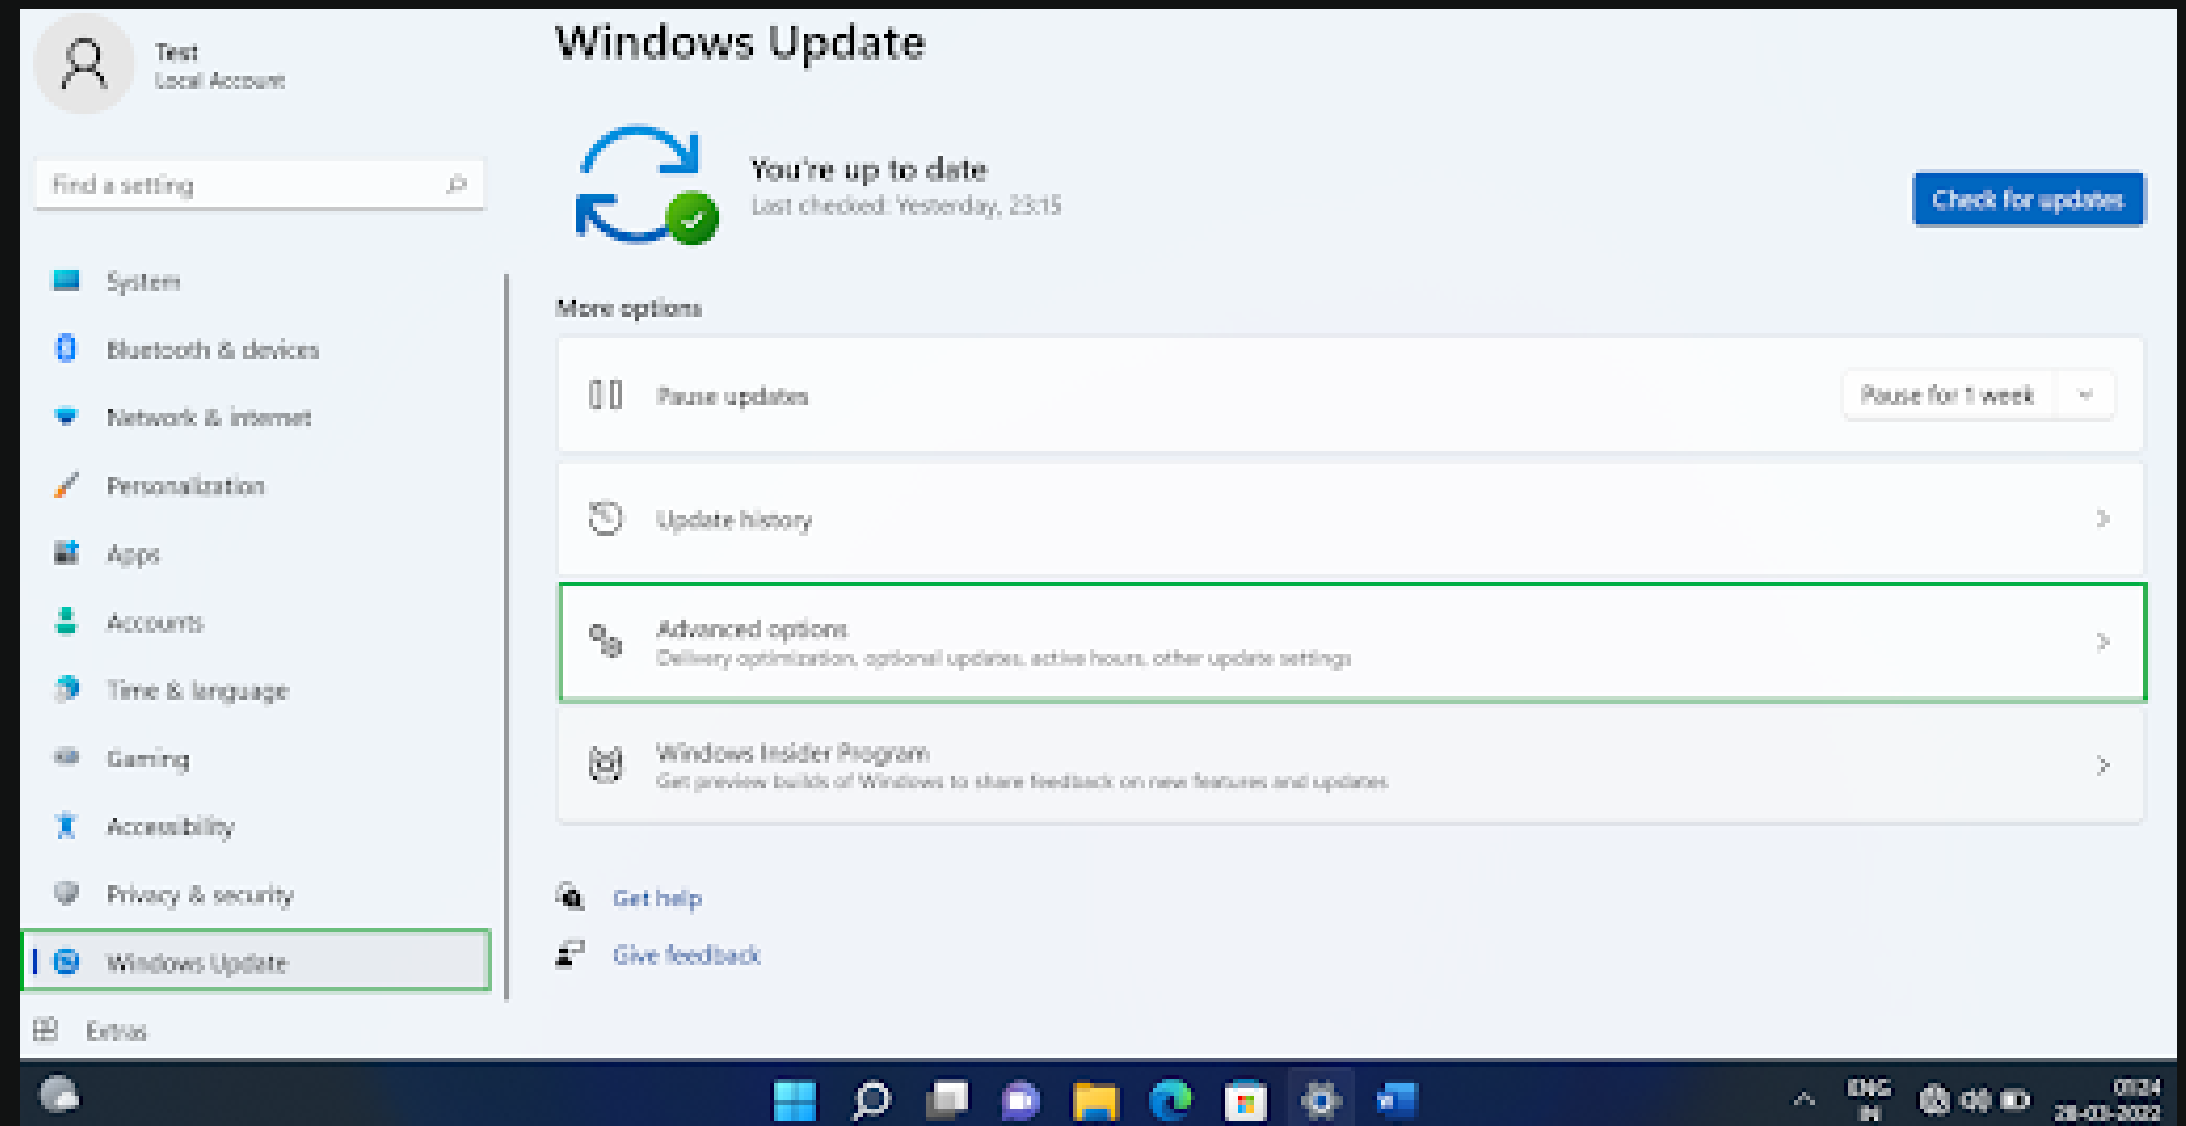

Step 2: On the **Windows Update** page, click **Check for updates**. Finish the system update by following the prompts.

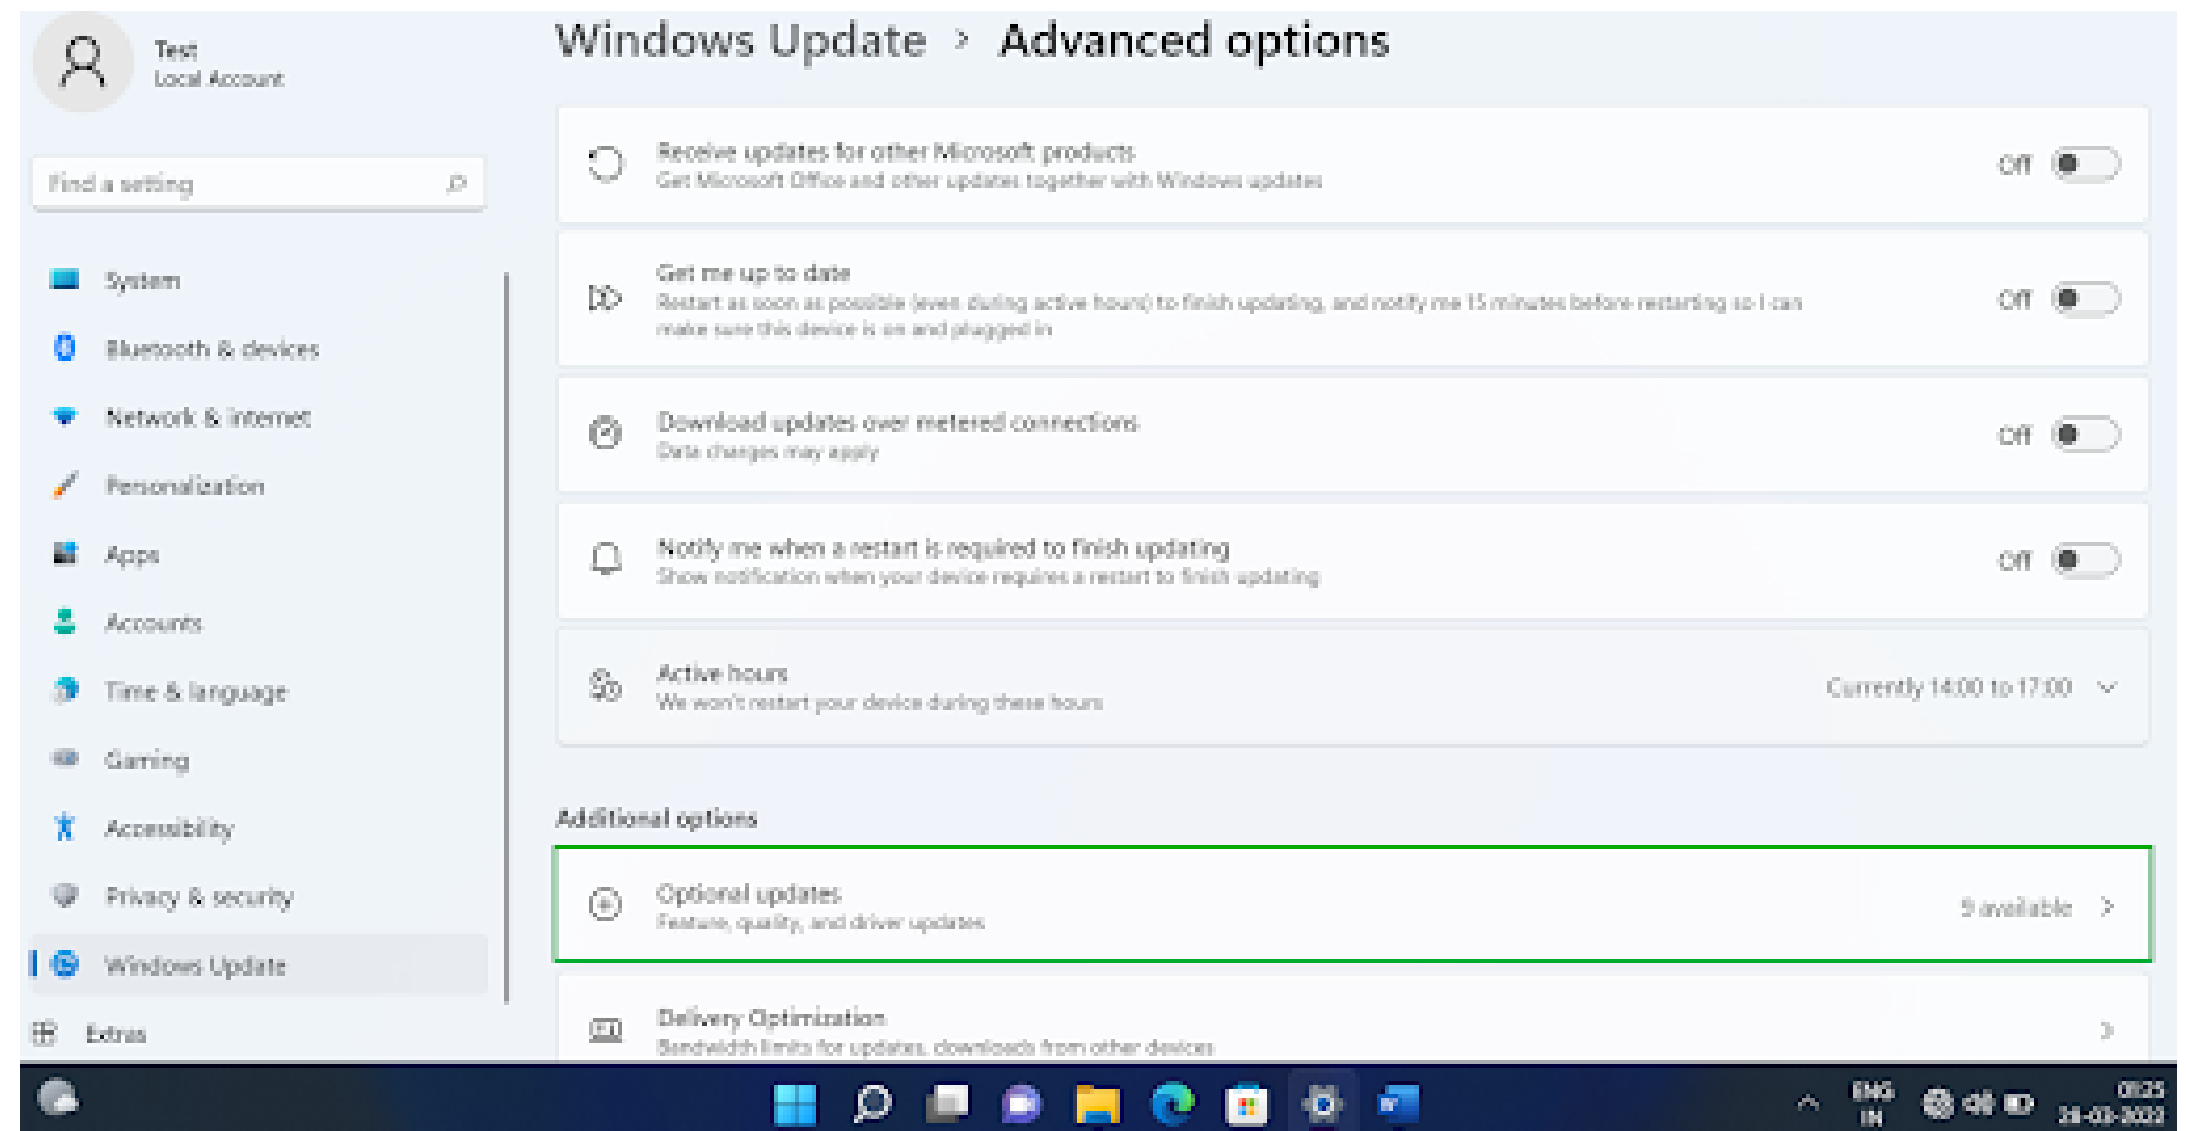

Via Settings:

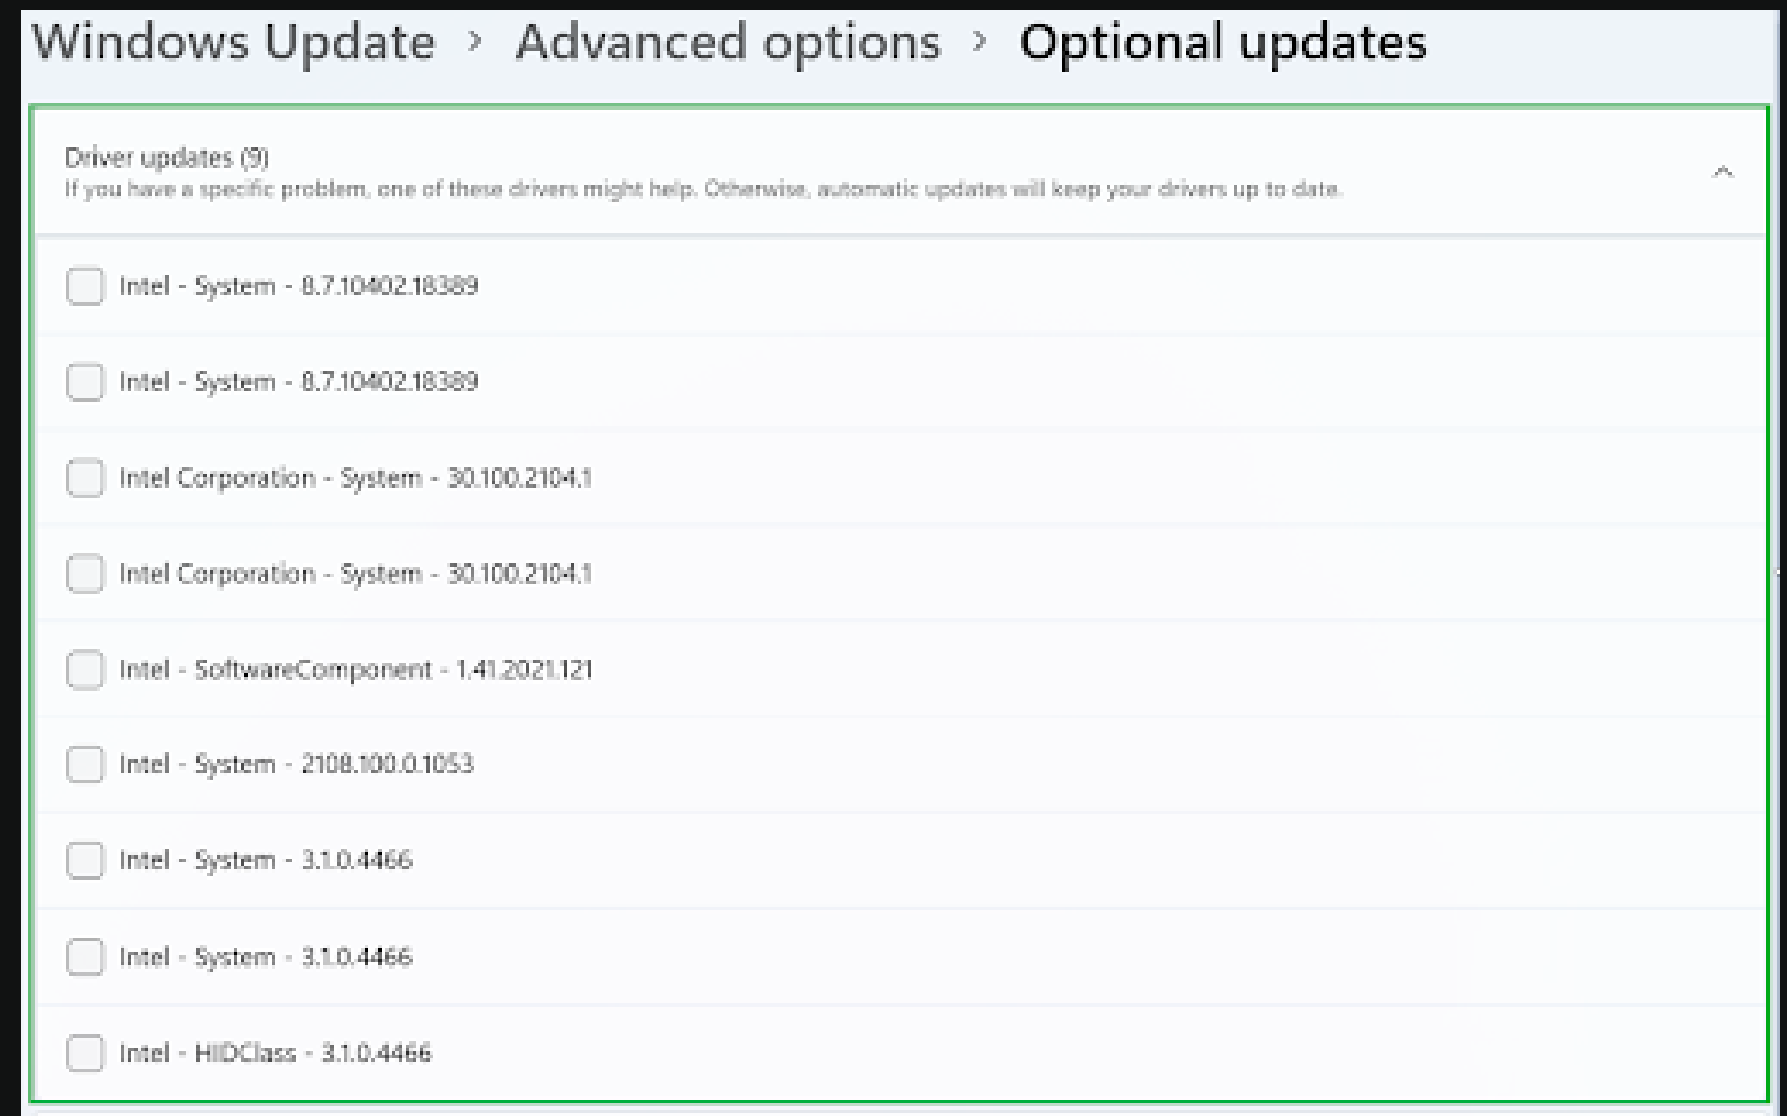

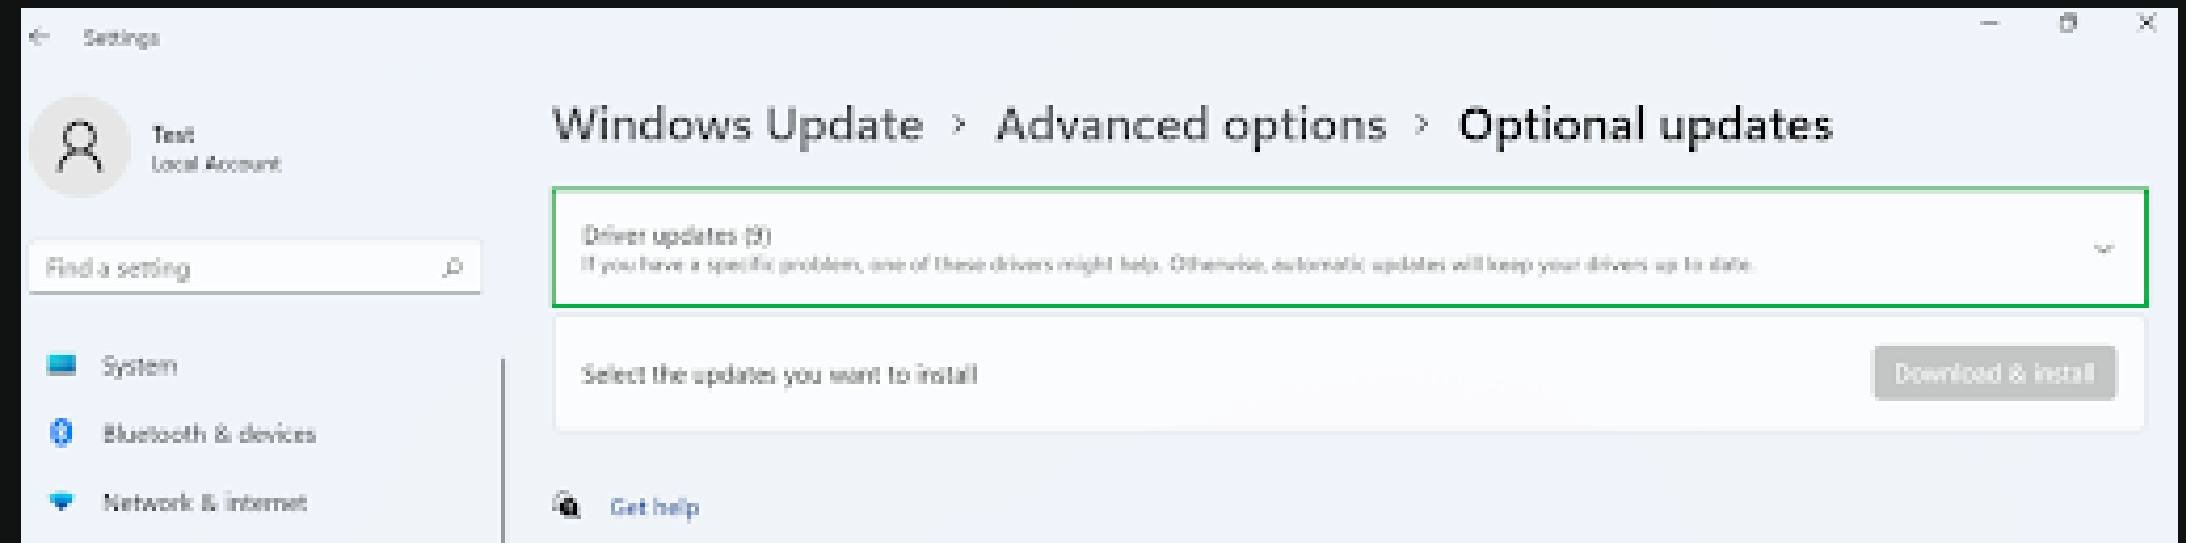

Step 1: Navigate to **Windows Update** and then go to **Advanced options**.

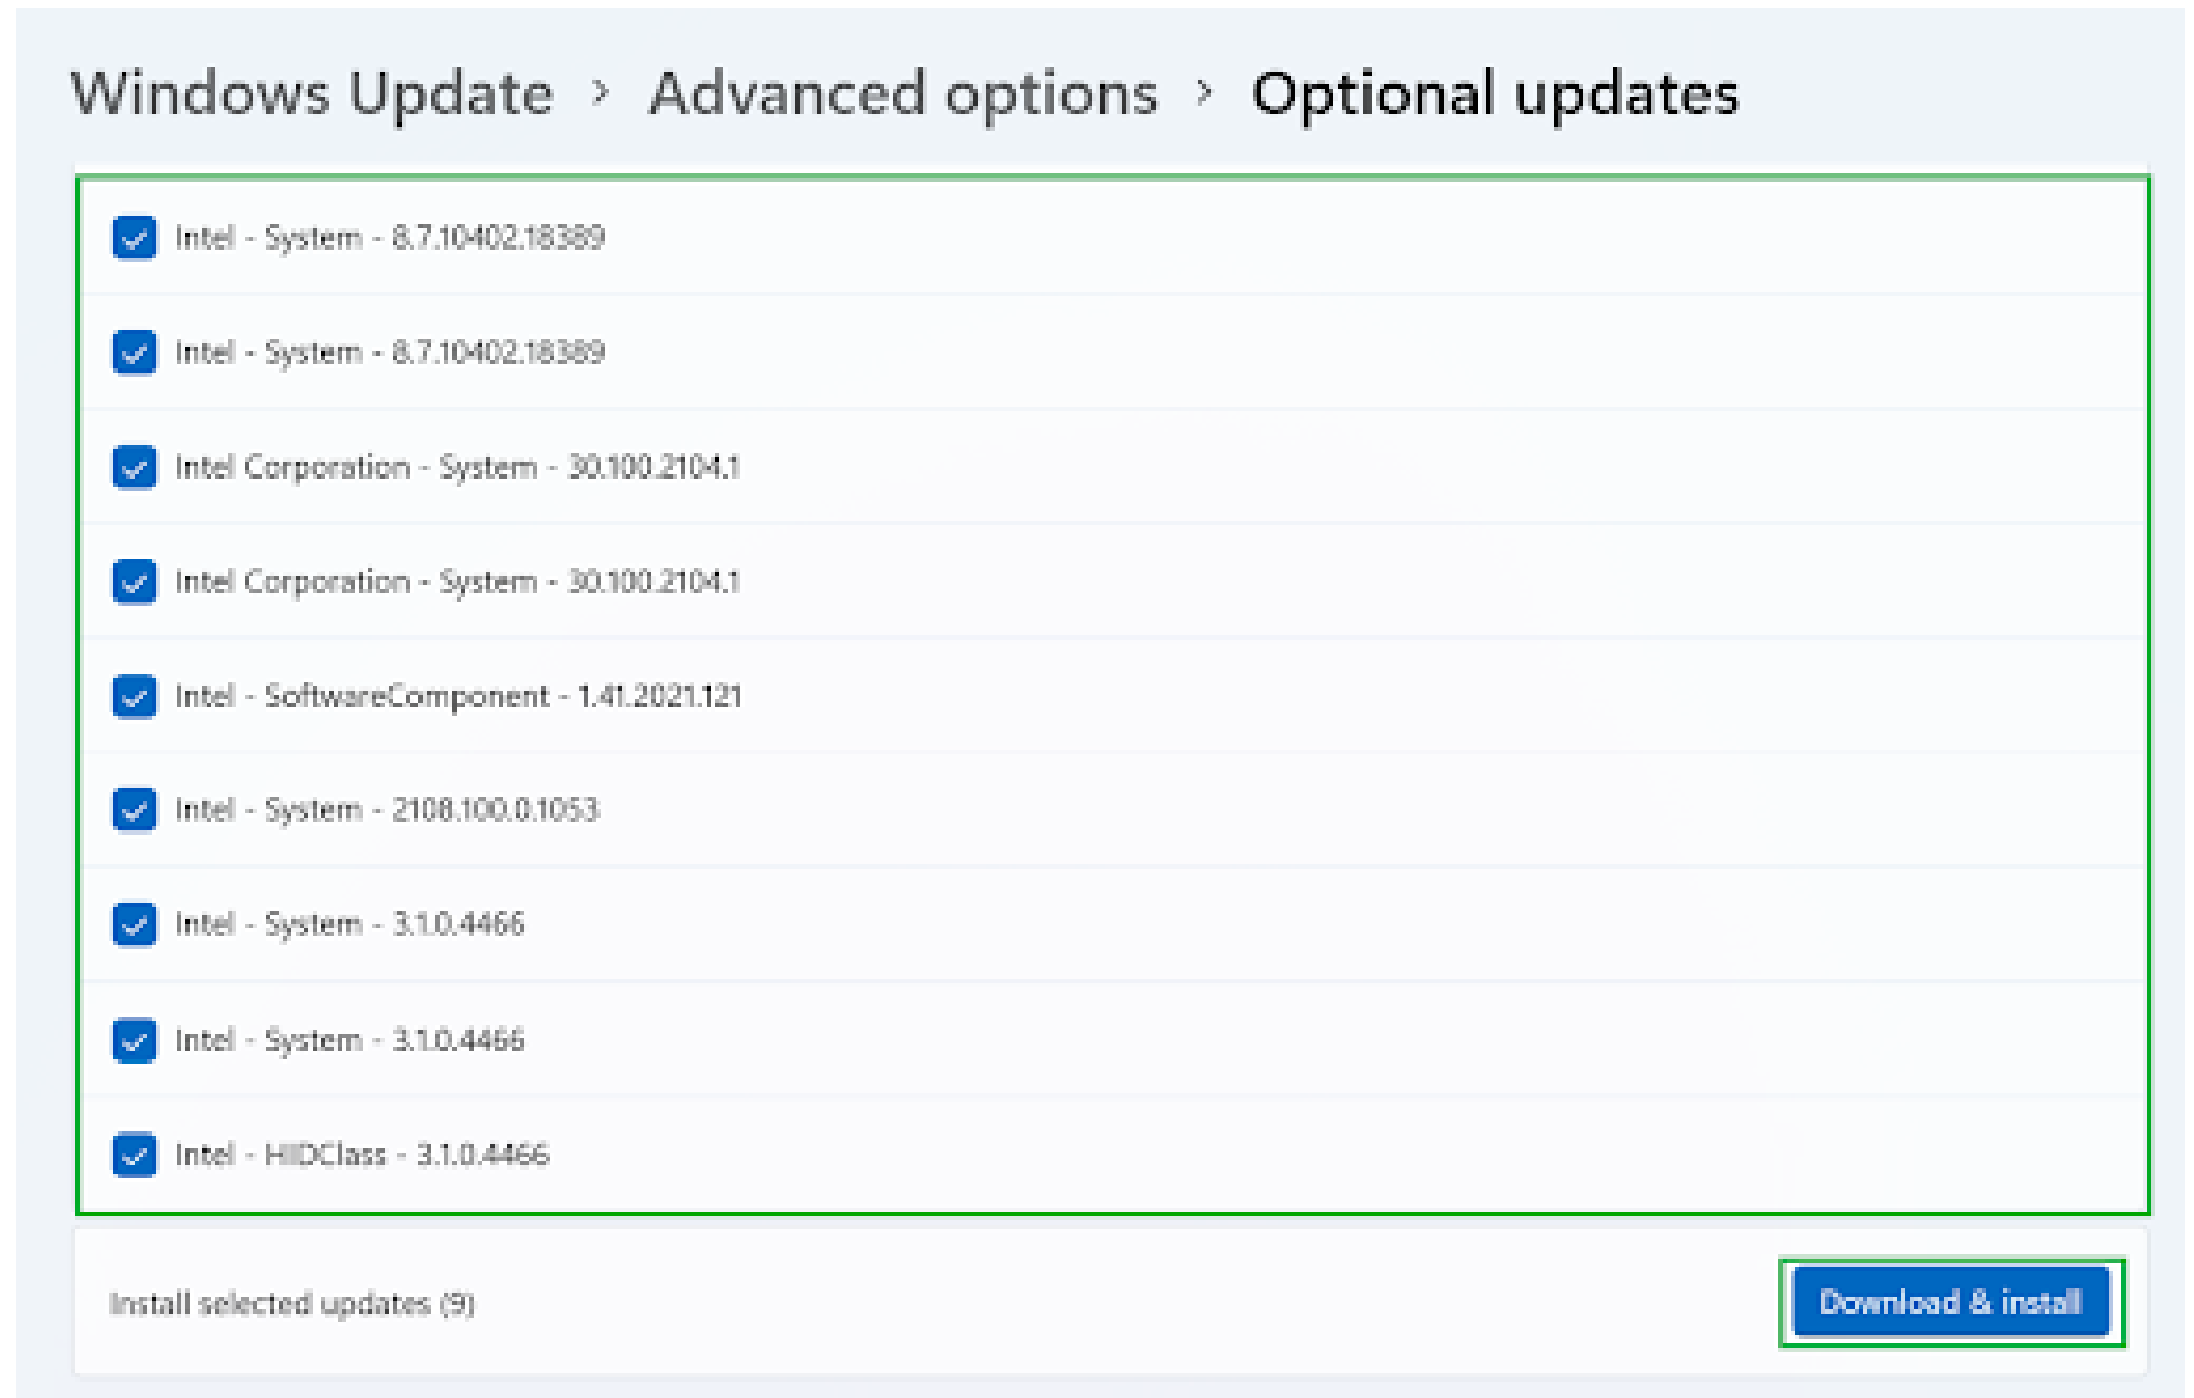

Step 2: Choose **Optional updates** under the **Additional options** section.

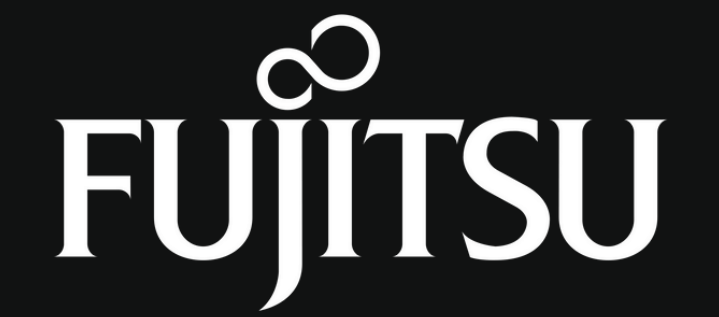

Step 3: Expand Driver updates to view available drivers.

Step 4: Select all available drivers and click **Download & install**. Finish the system update by following the prompts.

THANK
YOU
